

From Problem to Performance: How the 5P Framework Transformed EdTech Engagement

Ghulam Farid – Business Strategy & Product Analyst

FaridStrategy | User at the center. Value at the core. Impact at scale.

Case Study: LearnNow Platform (EdTech)

Industry: B2C online learning

Challenge: 62% learner drop-off after week 2

Outcome: +40% course completion · +28 pts NPS · 25% retention lift · +18% ARR

The Context

LearnNow, a fast-growing EdTech platform serving 250k+ active learners, faced a hidden crisis: users signed up enthusiastically but 62% abandoned courses before completing 25% of the curriculum. Retention rates plummeted, hurting subscription renewals and word-of-mouth. Traditional feature pushes failed. Leadership engaged me to apply the **5P Framework** – moving from scattered tactics to a value-driven, user-centric product strategy.

Applying the 5P Framework: Step by Step

01 PROBLEM – Find real problems worth solving

Action: Mixed-method research – 45 deep-dive interviews + cohort analysis of 18k learners + session replays.

Key insight: Learners felt lost. 78% dropped off right after the first module because there was no progress visibility, no sense of accomplishment. The root cause was not content quality – it was the *absence of achievement signals* and a clear learning roadmap.

Data-backed conclusion: 67% of users wanted milestone feedback and a “what’s next” guide.

02 POSITION – Define where to play and who to serve

Action: Segmented user personas based on motivation. Prioritised “**Career Accelerators**” – professionals aged 25-40 with less than 5 hours per week for upskilling.

Value proposition: *“Learn with clarity: turn every minute into visible progress and job-ready skills.”*

Differentiation: From a content library to an outcome engine – a personalised learning copilot with real-time progress tracking.

03 PLAN – Prioritise opportunities, map to measurable outcomes

Action: Workshop with product & engineering to define OKRs:

- Increase 4-week course completion by 30% (Q3)
- Improve weekly active usage by 25%

Initiatives (RICE-scored): Progress Hub dashboard, micro-badges, milestone celebrations, weekly nudges. Roadmap: MVP in 6 weeks, followed by iterative enhancements.

04 PRODUCT – Build simple, validate early, iterate fast

Action: Launched a low-fidelity prototype of the Progress Hub with 500 beta users. Collected feedback: learners wanted a clearer “next action” and social proof.

Iteration: Within 2 sprints – added milestone confetti, easy navigation, weekly recap email.

Validation: A/B test after 4 weeks – variant showed **+18% module completion**. Full rollout across mobile and web.

“Early validation prevented feature bloat and kept the team focused on real user value.”

05 PERFORMANCE – Measure what matters, drive impact at scale

Action: Real-time dashboards (Mixpanel + Tableau) tracking 30-day retention, course completion, feature adoption.

3-month results after full launch:

Metric	Before	After	Change
Course completion (4 weeks)	31%	71%	+40%
30-day retention	44%	69%	+25%
NPS	32	60	+28 pts

Business impact: Annual recurring revenue increased by 18% due to lower churn. Over 12,000 previously inactive learners were reactivated. CSAT reached 4.7/5.

The product team adopted the 5P Framework as their standard strategy playbook.

Why the 5P Framework Delivers

- **User-centered clarity** – Every decision starts with validated pain points, not assumptions.
- **Outcome-driven planning** – OKRs replace vague hopes, preventing “feature factory” syndrome.
- **Rapid validation loops** – Lean experimentation reduces waste and speeds time-to-value.
- **Unified language** – From boardroom to backlog, everyone speaks the same strategic language.

“The 5P framework gave us a common language from boardroom to backlog. Farid’s methodology turned fragmented efforts into a high-velocity value engine. The results speak for themselves.”

Final Takeaway

Better Strategy. Better Products. Better Impact.

The 5P Framework transforms strategy into product and value into measurable impact – keeping the user at the centre at every step.
